Explanation of the JET $n = 0$ chirping mode

H.L. Berk *et al* 2006 *Nucl. Fusion* **46** S888-S897

Figure 1(a) was repeated in this article, and the correct figure 1(b) was omitted. Below is figure 1 as it should have been published.

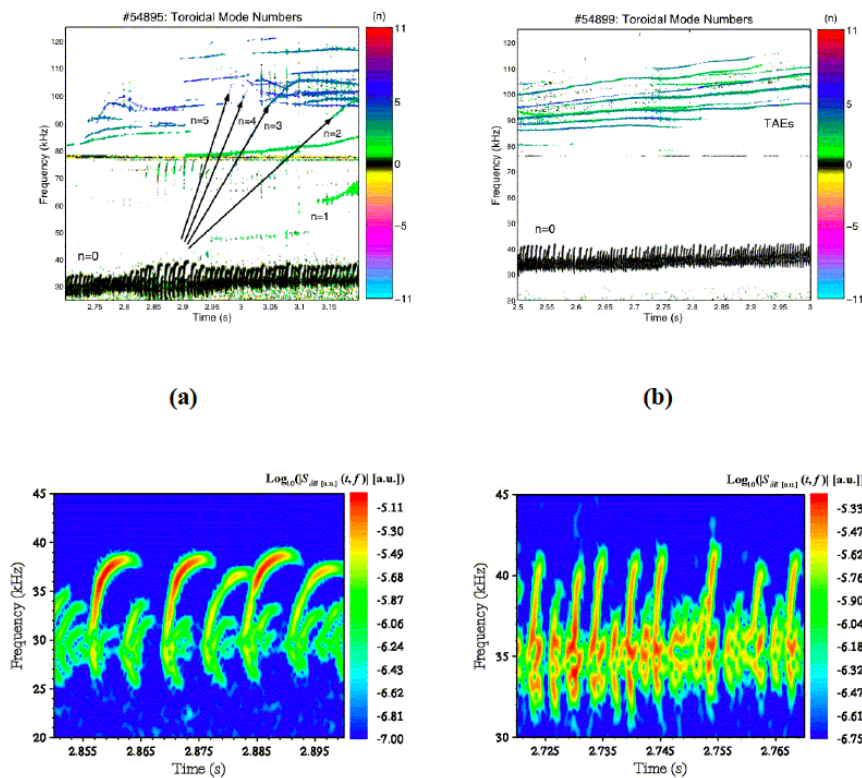

Figure 1. Frequencies for various toroidal n -numbers picked up by magnetic Mirnov signals in JET discharges: (a) #54895 and (b) #54899. Zooms of the frequency of the $n = 0$ mode are shown in (c) and (d) for discharges #54895 and #54899, respectively. In the legends of (c) and (d) $S_{\delta B}(t, f)$ is the short-time Fourier transform of δB with arbitrary units for δB and S .
